Fixed Slides not moving on correctly, especially if you were showing no charts

Fixed When repositioning the votes cast box in slide setup, it was not getting focus correctly

Fixed Use abstain was causing run time errors in setup

v4.0.42

Change Correct answer tick has been removed from ppvote, as it is not accurate – NOTE: You can place your own object on the PowerPoint slide and animate it in when you are ready.

Fixed If you press escape on a CLIKtext vote you would get -1's as your result – this is now fixed

Fixed CLIKtext was not loading the correct settings back in, resolved

Fixed Ratings vote issue on Norwegian versions of windows

Fixed Reshow was not allowing correct positioning of additional charts

Enhanced If you activate audio and have a list of people waiting to speak, double clicking will end the current audio session and open the one you have clicked on

v4.0.40

New Introduction of keypad weighting – i.e. for Shareholder meetings NOTE: You have to use a participant list

Enhanced More improvements to convert slide to voting slide

Enhanced Count down votes which auto close now indicate how many votes are coming in

v4.0.30

New Instant groups – whilst setting up a voting question, you can allocate it as the default grouping question. Then on any vote slide once you have collected the results you can press CTRL+SHIFT+# (a number) and it will show the votes for that group

New When in results display mode you can now increase and decrease the size of the font on the slide (Ctrl + + and -)

New When in results display mode you can now increase and decrease the line spacing of the answers on the slide (Ctrl + Shift + + and -)

New There will be a message if you try to run an unconverted v3 activity. You will need to open the slide editor on each v3 activity to convert it automatically to a v4 activity

Enhanced You can now use more graphing types with ratings style votes

Enhanced More improvements to displaying of bullets / numbers / letters

Enhanced There is a double check to ensure that bullets / numbers / letters are correct when using the wizard so people know what to vote

Enhanced The convert to voting slide works better at recognising line markers v.s. Words in the questions

Enhanced G can now generate random decimal values whilst testing on those vote types that require it

Enhanced The ratings vote has been updated to enable you to have just a single item in the list

Enhanced Convert Slide now has an improved interface to select questions and answers and to allow for object votes, ratings votes and others.

Enhanced When looking at the presentation with the results inserted, if you have ppvote on your computer you can use quick key access to see breakdowns on the ratings graph

Enhanced Check for updates is now more robust and works with more firewalls and anti virus software

Enhanced External graphing, spell check and compression software has been updated

Enhanced Sequence voting now supports the sorting of graphs – high to low, low to high, or none.

Enhanced Sequence voting if you have prioritizer keypads you can select the voting method to use for a sequence vote

Enhanced Results Table now supports better reporting for the different vote types

Enhanced When setting up the object vote you can load in the image during setup, so you do not have to pre prepare your slide.

Enhanced Ratings vote type will allow you to have only one item so you can get an average graph

Intentionally BLANK
